

TSC - Main Site (www.theshakticollective.in)

The **entry point** where **artists** and **partners** discover the ecosystem and begin their journey with **TSC**.

A tentative flow is outlined in the “**TSC Main Site Flow & Structure.pdf**”.

Academy Site (www.tscacademy.in)

Academy is the **entry point** for **artists** to the **TSC Engine**. It will follow a clean LMS structure Architecture.

TSC Engine (Platform Layer)

For the purpose of this document, the term **TSC Engine** or **Engine** is used to refer to the **core platform layer** of the ecosystem.

The **TSC Engine** refers to the **core platform layer** of the ecosystem where **artists onboard** (Through the **TSC Academy**) , **build their identity**, and **access a suite of structured tools designed to support their journey**.

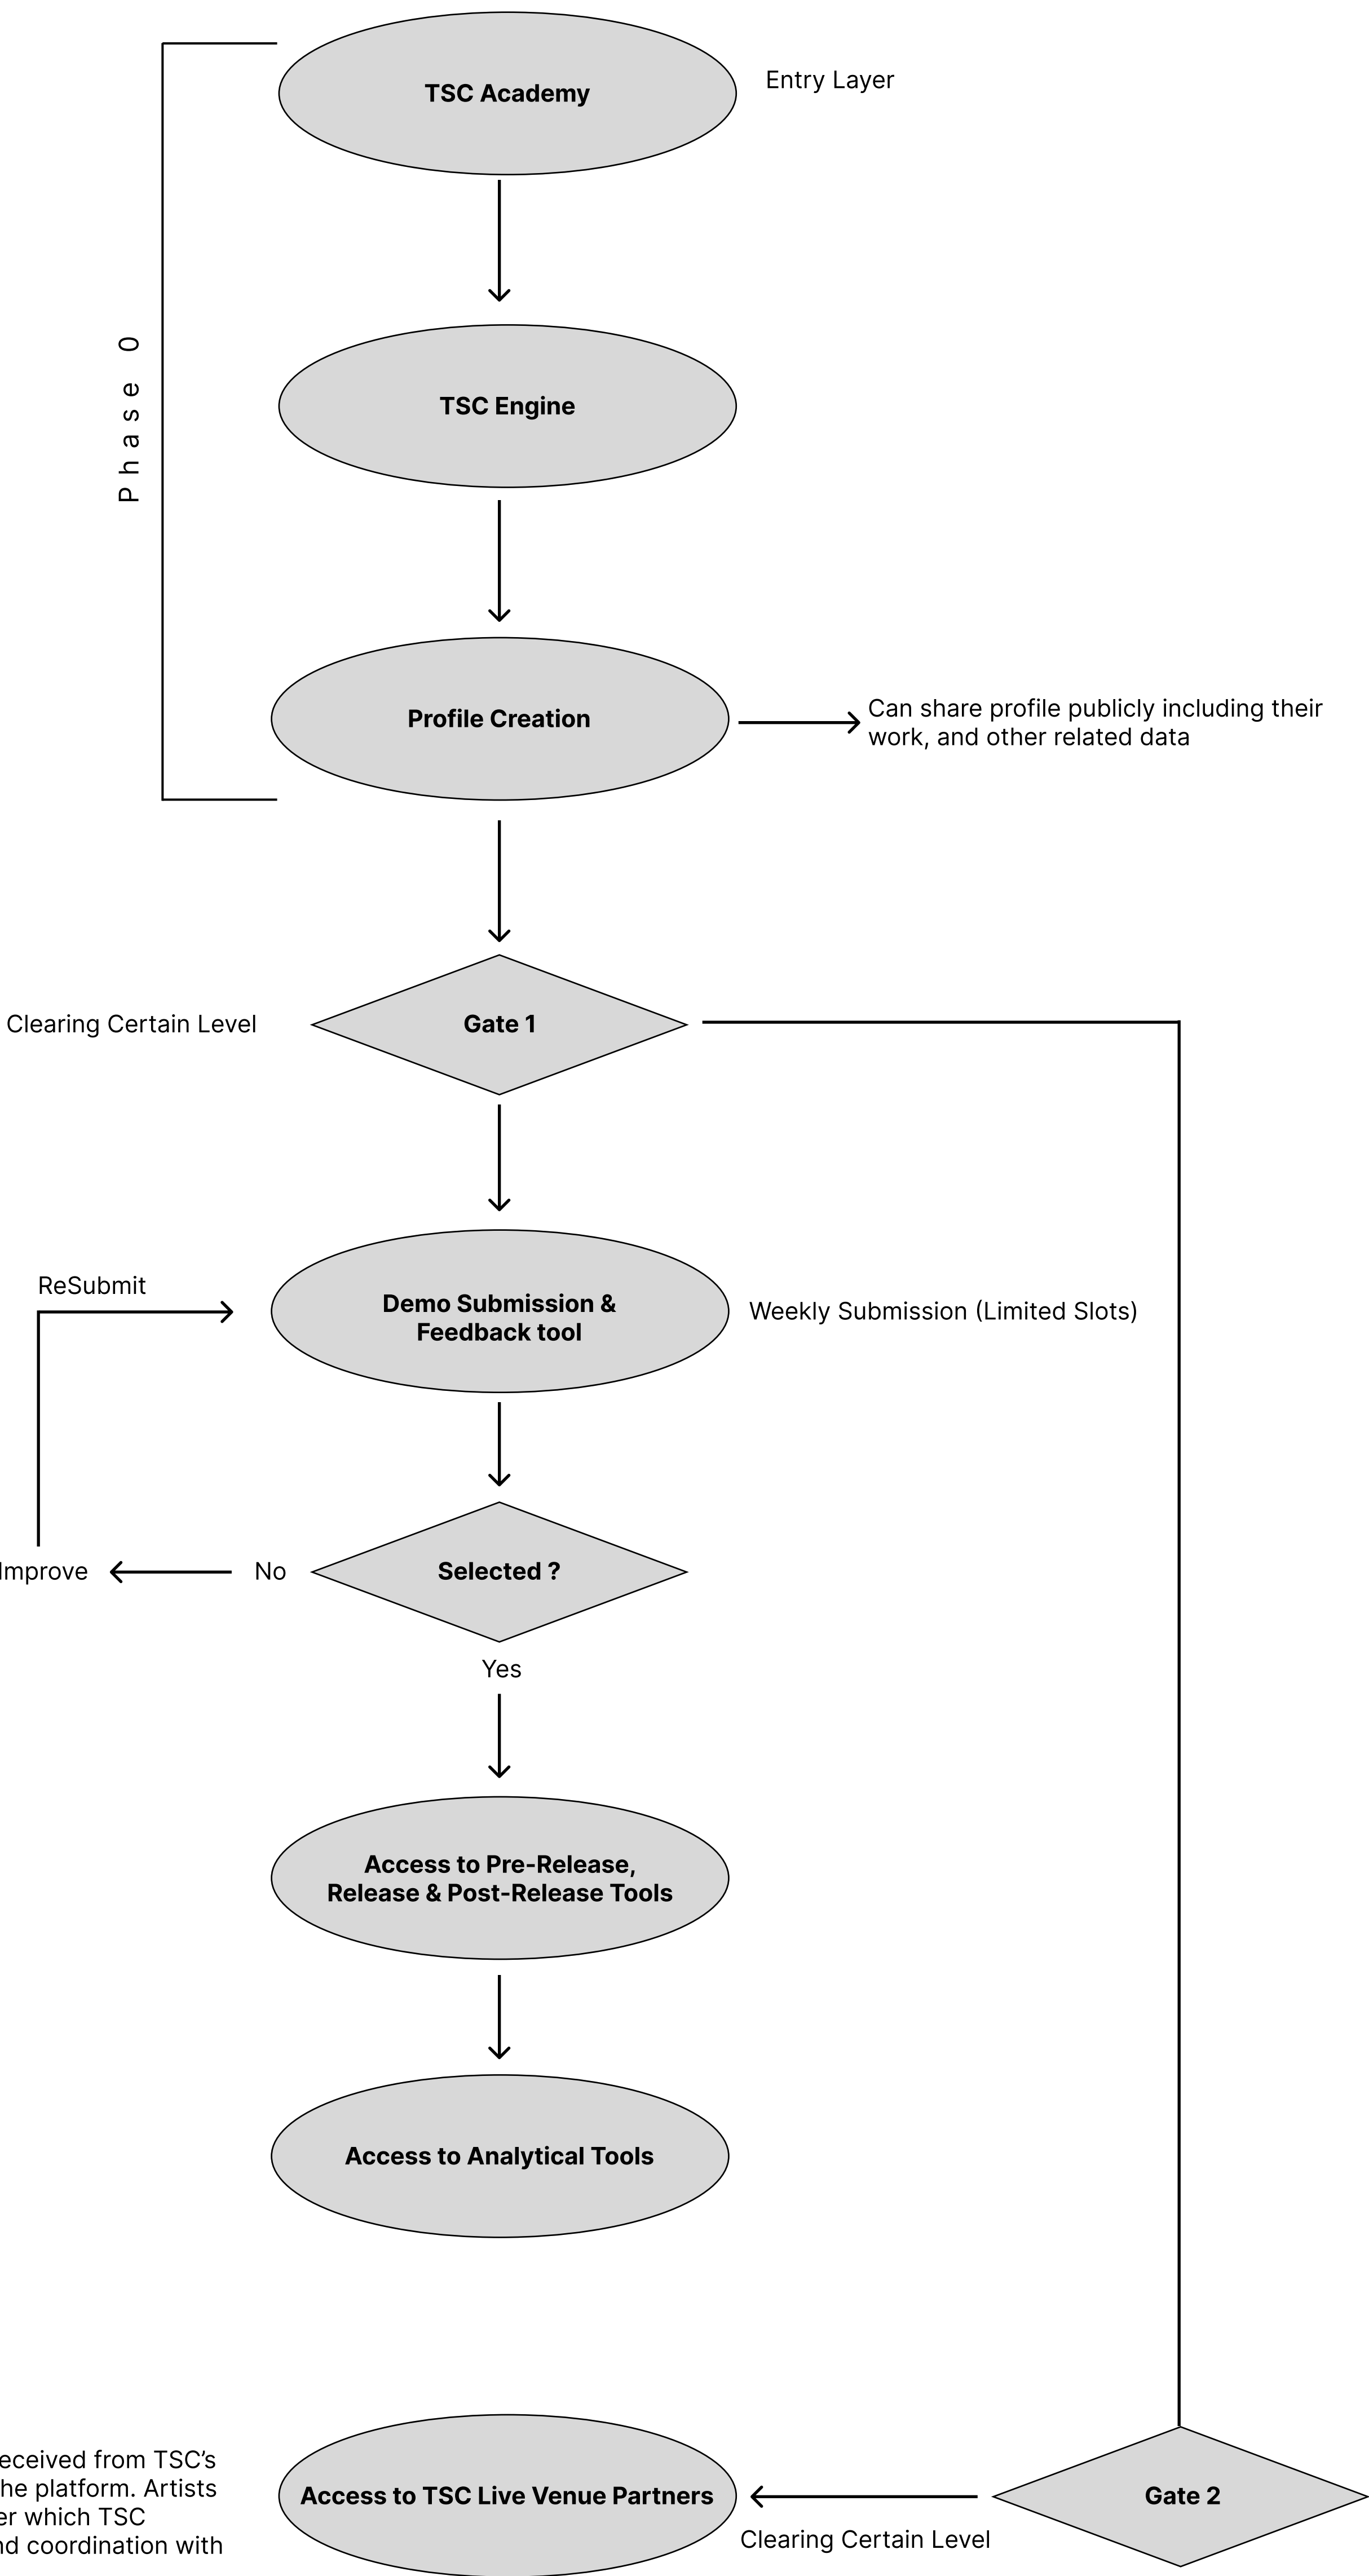

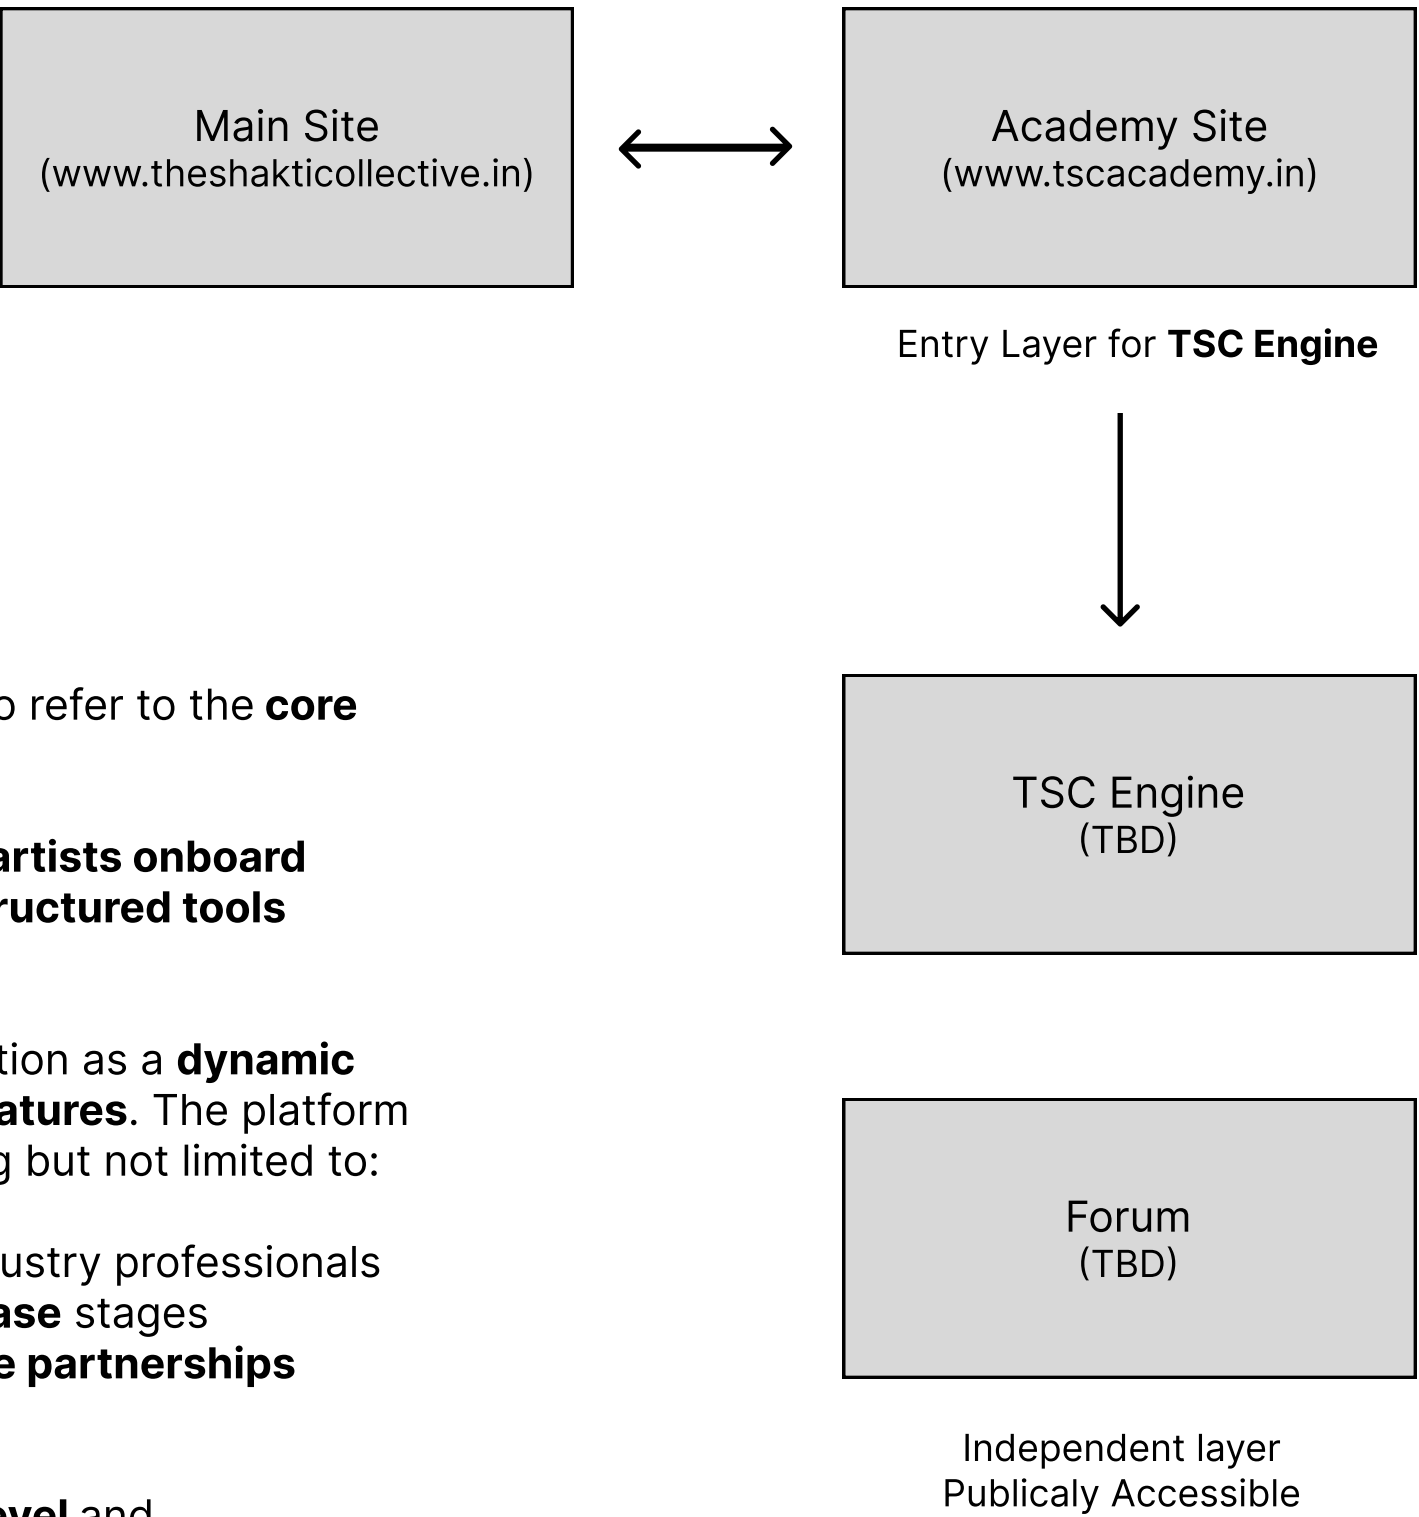

Once onboarded, **artists can create and manage their profiles**, which function as a **dynamic** and **shareable** catalogue of their work (similar to an EPK) with **analytical features**. The platform provides access to a range of **integrated tools** developed by **TSC**, including but not limited to:

- **Demo submission** and **structured feedback systems** from mentors, industry professionals
- A guided **release pipeline** covering **pre-release**, **release**, and **post-release** stages
- Access to **curated live performance opportunities** through **TSC's venue partnerships**
- Tools to **build** and **share** a **professional public artist profile**

Access to these features is **progressively unlocked based on the artist's level** and **achievements** within the ecosystem. Artists can also showcase these achievements on their public profiles, reinforcing credibility and growth.

The **Engine** acts as the **operational backbone** of the **ecosystem**, **enabling artists** to move from **creation** to **real-world exposure** in a **structured** and **scalable manner**.

Overall Architecture

Live performance opportunities received from TSC's venue partners are listed within the platform. Artists can apply to relevant listings, after which TSC facilitates selection, matching, and coordination with the venue.

Implementation Plan

The overall system will be developed and deployed in phased stages to ensure efficient execution, maintain quality, and enable clear communication across teams. Each phase builds upon the previous one, allowing for validation, iteration, and controlled scaling of the platform.

Phase 1 — Main Site

- Design and develop the primary website
- Establish brand positioning, messaging, and user journey
- Implement dual funnels:
 - Artist onboarding
 - Brand / partner engagement

Phase 2 — TSC Academy (Learning Layer)

- Develop a custom Learning Management System (LMS)
- Migrate existing programmes onto the new Platform
- Enable onboarding of artists into the ecosystem

Phase 3 — TSC Engine (Core Platform Layer)

- Build the core platform infrastructure
- Implement key modules:
 - Artist profiles and catalogue system
 - Demo submission and feedback system (gated)
 - Release pipeline (pre-release, release, post-release)
 - Opportunity layer (live performances, brand collaborations)

Phase 4 — Open Community Layer (Discourse Forum)

- Launch a community platform for broader engagement
- Enable:
 - Discussions
 - Peer interaction
 - Knowledge sharing
